PROFESSIONAL SUMMARY

Backend-focused student with hands-on contributions to production Spring Boot systems (PSMRI, Traccar). Skilled in Java, Spring Boot, and REST APIs with experience in clean architecture, authentication flows, and real-world debugging. Seeking a Backend Developer Intern role.

WORK EXPERIENCES

Open Source Contributor | Freelance

Jan 2026 - Feb 2026

Traccar

- Diagnosed and resolved **GitHub Issue #5801** — a stale authorization bug in OpenID login flow where admin privileges were only assigned during initial user creation
- Fixed by re-evaluating administrator flags on every login and syncing with the Identity Provider (IdP)
- Implemented conditional DB update — writes only when a role change is detected, avoiding unnecessary mutations

Open Source Contributor | Freelance

Dec 2025 - Jan 2026

PSMRI (C4GT / AMRIT)

Remote

- Implemented `/health` and `/version` endpoints in a production Spring Boot microservice
- Added database and Redis dependency checks returning HTTP 200/503 based on service health
- Exposed commit hash and build timestamp for deployment traceability
- Refactored controller logic into a dedicated service layer for clean separation of concerns

PROJECTS

StreetTax – Rule-Based Tax Estimation API | 📄 Github

- Built a REST API that estimates road tax using a rule-based pricing engine across 3 vehicle types and 3 route categories
- Applied layered architecture (Controller → Service → DTO) with clean separation of business logic
- Designed multiplier-based pricing model ($\text{distance} \times \text{base rate} \times \text{vehicle factor} \times \text{route factor}$)
- Implemented custom `BadRequestException` and `BusinessException` with a `@RestControllerAdvice` global handler returning structured JSON error responses
- Validated edge cases including zero distance, null route type, and unsupported enum values

Technologies / Tools Used : Java, Spring Boot

JargonTranslator – AI-Powered Text Transformation API | 📄 Github

- **Developed** a backend service to transform text into corporate jargon via **OpenAI API**.
- **Designed** REST endpoints for text processing with structured JSON responses.
- **Integrated** third-party APIs with robust request validation and error handling.

Technologies / Tools Used : Java, Spring Boot

SKILLS

Databases :	MySQL
Frameworks Libraries :	Spring Boot, REST APIs
Programming Languages :	Java, C++, SQL
Soft Skills :	Communication, Problem Solving, Teamwork
Tools Platforms :	Git, GitHub, Postman, IntelliJ IDEA

EDUCATION

Trinity Academy of Engineering | Pune, Maharashtra

2023 - Present

Bachelor of Engineering (B.E.)

- **B.E. in Electronics & Telecommunication**

ACHIEVEMENTS

Contributed to **2 open source projects** (PSMRI, Traccar) with merged PRs in production codebases.
Solved 60+ problems on LeetCode (Contest Rating 1549, Top 32%) and practiced on A2Z DSA Sheet
